

# New Camo Dash & Switch Panels

## Daystar Dash & Switch Panels Now Available in Camouflage

Daystar's best-selling Dash and Switch Panels are now available in camouflage! These popular accessories create usable storage space for small items, and with the addition of a custom camouflage finish, they are perfect for Outdoor enthusiasts that want to customize the interior of their vehicle.

Daystar Dash & Switch Panels are designed using the latest computer-modeling software, so they match the contours of the factory dash for a precise fit. They feature a main tray that is suitable for mounting a GPS unit, or they can be used as convenient storage for cell phones, sunglasses, MP3 players, and other small items. The sides and back of the dash panel have been raised to maximize holding power for stored items while having virtually no effect on visibility through the windshield for the driver or passengers. Daystar Dash Panels install in minutes using simple hand tools.

Daystar Switch Panels make adding switches for electrical accessories a snap! These panels are direct snap-in replacements for original dash pieces and are pre-scored to accept two or four electrical switches. Daystar offers high-quality 20-amp rocker switches separately.

# New Camo Winch Isolators

## Daystar Winch Isolators Now Available in Camouflage

Daystar's popular Winch Isolators for Roller and ATV fairleads are now available in Camouflage! These popular winch accessories prevent the winch hook from rattling against the fairlead and they also "clean up" the look of a winch installation. With the addition of camouflage, these isolators are the perfect exterior accessory for Outdoor enthusiasts.

A properly stowed winch cable should have some tension on it when not in use to avoid cable snags and damage. This means anchoring the hook to a nearby tow point, which can be cumbersome, or sucking the hook in all the way to the fairlead, which can cause the hook to rattle and become jammed. Daystar's Winch Isolator addresses the needs of all winch owners by providing a hook "rest" that does the job without affecting winch operation.

Constructed of the same durable polyurethane found in the rest of Daystar's quality product line, the Winch Isolators install in minutes. The isolators provide a quick, convenient, and rattle-free way to store the winch hook when not in use. Daystar Winch Isolators work with the conventional roller fairleads used on trucks and ATVs.

The new camouflage finish of the Winch Isolators is a popular woods-type pattern found on clothing and many other Outdoor Accessories. These isolators will remain available in black as well.
